

# 1

## Connect the Speakers

### Traditional Speaker Connection

Connect the active speakers to the hub using the speaker cable included in the box or any 2 conductor speaker cable. Don't worry about the polarity of the cables and terminals. The system operates at maximum performance in any case due to its digital nature.

The cables transfer both signal and power, which is why you don't need an extra power cable for each active speaker.

### Alternative Speaker Chain

The hub can be placed between the speakers as illustrated above or you can choose to place the hub in one side as part of a speaker chain. Just connect the first active speaker to the hub and the second speaker to the first speaker.

The process of system activation illustrated on these pages is identical, regardless of which Opalum active speaker model you have.

# 2

## Connect Power to the Hub

Connect the power cable to the power supply and power supply to the hub. Plug the power cable into an un-switched power outlet.

# 3

## Connect Input Sources

### Digital Sources

Computer, Apple tv, Airport Express, Blu-ray, DVD, TV, video games, HTPC etc.

### Analog Sources

MP3-player etc.

### Subwoofer

In most cases the system won't require a subwoofer, but should you happen to be a fan of extreme deep and vibrant bass, just connect your subwoofer to the hub and turn the low-pass frequency setting to max. The only thing you need to adjust is the subwoofer level.

### Connect Input Sources

Depending on your choice of sources and connection cables, connect the cables to the correct inputs on the hub. The type of inputs is indicated on the hub in both colours and text.

### Activating the Sound System

Turn on power to all input sources and the system itself. The hub will automatically turn on. There is no need for source selection as the system automatically plays music from any connected source.

# 4

## Connect Bluetooth

### Connecting through Bluetooth

You can stream your music wirelessly from a smartphone, tablet or any other Bluetooth enabled device directly to your Opalum system.

After the hub is powered the system is ready for pairing with your Bluetooth device.

Activate Bluetooth on your device and search for nearby connections. Your Bluetooth device must be within 10 meters reach of the hub.

Choose "Opalum" and enter PIN/passcode: 1397.

The sound quality from your Opalum speakers depends on the music file type/compression rate and which Bluetooth version your device is using. For optimal quality use lossless music formats and use the latest Bluetooth version available for your device.

Bluetooth PIN/passcode:

1397

#### Separate box

#### **2 new Opalum active Speakers**

According to your choice of model.

#### **Cables and Power Supply**

- 1 Power supply with connection for hub
- 1 European power cord
- 1 American power cord
- 2 Digital speaker/power cables – for connecting hub and active speakers (Yes, the cables transmit both digital signal and power to the speakers).
